# Contents

<b>1</b>	<b>Probability, Random Variables and Expectations</b>	<b>1</b>
1.1	Axiomatic Probability . . . . .	1
1.2	Univariate Random Variables . . . . .	7
1.3	Multivariate Random Variables . . . . .	20
1.4	Expectations and Moments . . . . .	33
<b>2</b>	<b>Estimation, Inference, and Hypothesis Testing</b>	<b>57</b>
2.1	Estimation . . . . .	57
2.2	Convergence and Limits for Random Variables . . . . .	67
2.3	Properties of Estimators . . . . .	71
2.4	Distribution Theory . . . . .	78
2.5	Hypothesis Testing . . . . .	94
2.6	The Bootstrap and Monte Carlo . . . . .	106
2.7	Inference on Financial Data . . . . .	111
<b>3</b>	<b>Analysis of Cross-Sectional Data</b>	<b>129</b>
3.1	Model Description . . . . .	129
3.2	Functional Form . . . . .	133
3.3	Estimation . . . . .	135
3.4	Assessing Fit . . . . .	138
3.5	Assumptions . . . . .	143
3.6	Small Sample Properties of OLS estimators . . . . .	144
3.7	Maximum Likelihood . . . . .	146
3.8	Small Sample Hypothesis Testing . . . . .	148
3.9	Large Sample Assumption . . . . .	163
3.10	Large Sample Properties . . . . .	164
3.11	Large Sample Hypothesis Testing . . . . .	166
3.12	Violations of the Large Sample Assumptions . . . . .	171
3.13	Model Selection and Specification Checking . . . . .	183
3.14	Projection . . . . .	200
3.A	Selected Proofs . . . . .	202

<b>4</b>	<b>Analysis of a Single Time Series</b>	<b>213</b>
4.1	Stochastic Processes . . . . .	213
4.2	Stationarity, Ergodicity, and the Information Set . . . . .	213
4.3	ARMA Models . . . . .	216
4.4	Difference Equations . . . . .	224
4.5	Data and Initial Estimates . . . . .	231
4.6	Autocorrelations and Partial Autocorrelations . . . . .	232
4.7	Estimation . . . . .	244
4.8	Inference . . . . .	247
4.9	Forecasting . . . . .	248
4.10	Nonstationary Time Series . . . . .	252
4.11	Nonlinear Models for Time-Series Analysis . . . . .	264
4.12	Filters . . . . .	264
4.A	Computing Autocovariance and Autocorrelations . . . . .	278
<b>5</b>	<b>Analysis of Multiple Time Series</b>	<b>303</b>
5.1	Vector Autoregressions . . . . .	303
5.2	Companion Form . . . . .	309
5.3	Empirical Examples . . . . .	310
5.4	VAR forecasting . . . . .	312
5.5	Estimation and Identification . . . . .	314
5.6	Granger causality . . . . .	319
5.7	Impulse Response Functions . . . . .	320
5.8	Cointegration . . . . .	326
5.9	Cross-sectional Regression with Time-series Data . . . . .	345
5.A	Cointegration in a trivariate VAR . . . . .	351
<b>6</b>	<b>Generalized Method Of Moments (GMM)</b>	<b>363</b>
6.1	Classical Method of Moments . . . . .	363
6.2	Examples . . . . .	364
6.3	General Specification . . . . .	368
6.4	Estimation . . . . .	371
6.5	Asymptotic Properties . . . . .	375
6.6	Covariance Estimation . . . . .	379
6.7	Special Cases of GMM . . . . .	384
6.8	Diagnostics . . . . .	388
6.9	Parameter Inference . . . . .	390
6.10	Two-Stage Estimation . . . . .	393
6.11	Weak Identification . . . . .	395
6.12	Considerations for using GMM . . . . .	396

<b>7</b>	<b>Univariate Volatility Modeling</b>	<b>399</b>
7.1	Why does volatility change?	399
7.2	ARCH Models	401
7.3	Estimation and Inference	419
7.4	GARCH-in-Mean	424
7.5	Alternative Distributional Assumptions	425
7.6	Model Building	428
7.7	Forecasting Volatility	430
7.8	Realized Variance	436
7.9	Implied Volatility and VIX	445
7.A	Kurtosis of an ARCH(1)	451
7.B	Kurtosis of a GARCH(1,1)	454
<b>8</b>	<b>Value-at-Risk, Expected Shortfall and Density Forecasting</b>	<b>465</b>
8.1	Defining Risk	465
8.2	Value-at-Risk (VaR)	466
8.3	Conditional Value-at-Risk	468
8.4	Unconditional Value at Risk	475
8.5	Evaluating VaR models	478
8.6	Expected Shortfall	483
8.7	Density Forecasting	484
8.8	Coherent Risk Measures	494
<b>9</b>	<b>Multivariate Volatility, Dependence and Copulas</b>	<b>503</b>
9.1	Introduction	503
9.2	Preliminaries	504
9.3	Simple Models of Multivariate Volatility	507
9.4	Multivariate ARCH Models	516
9.5	Realized Covariance	526
9.6	Measuring Dependence	536
9.7	Copulas	545
9.A	Bootstrap Standard Errors	557

# List of Figures

1.1	Set Operations . . . . .	3
1.2	Bernoulli Random Variables . . . . .	9
1.3	Normal pdf and cdf . . . . .	12
1.4	Poisson and $\chi^2$ distributions . . . . .	14
1.5	Bernoulli Random Variables . . . . .	16
1.6	Joint and Conditional Distributions . . . . .	27
1.7	Joint distribution of the FTSE 100 and S&P 500 . . . . .	31
1.8	Simulation and Numerical Integration . . . . .	34
1.9	Modes . . . . .	40
2.1	Convergence in Distribution . . . . .	68
2.2	Consistency and Central Limits . . . . .	75
2.3	Central Limit Approximations . . . . .	76
2.4	Data Generating Process and Asymptotic Covariance of Estimators . . . . .	90
2.5	Power . . . . .	99
2.6	Standard Normal cdf and Empirical cdf . . . . .	108
2.7	CRSP Value Weighted Market (VWM) Excess Returns . . . . .	114
3.1	Rejection regions of a $t_{10}$ . . . . .	151
3.2	Bivariate $F$ distributions . . . . .	153
3.3	Rejection region of a $F_{5,30}$ distribution . . . . .	155
3.4	Location of the three test statistic statistics . . . . .	163
3.5	Effect of correlation on the variance of $\hat{\beta}^{IV}$ . . . . .	178
3.6	Gains of using GLS . . . . .	183
3.7	Neglected Nonlinearity and Residual Plots . . . . .	189
3.8	Rolling Parameter Estimates in the 4-Factor Model . . . . .	192
3.9	Recursive Parameter Estimates in the 4-Factor Model . . . . .	193
3.10	Influential Observations . . . . .	196
3.11	Correct and Incorrect use of “Robust” Estimators . . . . .	199
3.12	Weights of an S&P 500 Tracking Portfolio . . . . .	201
4.1	Dynamics of linear difference equations . . . . .	230
4.2	Stationarity of an AR(2) . . . . .	232
4.3	VWM and Default Spread . . . . .	233
4.4	ACF and PACF for ARMA Processes . . . . .	238
4.5	ACF and PACF for ARMA Processes . . . . .	239

4.6	Autocorrelations and Partial Autocorrelations for the VWM and the Default Spread . . .	242
4.7	M1, M1 growth, and the ACF and PACF of M1 growth . . . . .	254
4.8	Time Trend Models of GDP . . . . .	257
4.9	Unit Root Analysis of $\ln CPI$ and the Default Spread . . . . .	263
4.10	Ideal Filters . . . . .	266
4.11	Actual Filters . . . . .	269
4.12	Cyclical Component of U.S. Real GDP . . . . .	273
4.13	Markov Switching Processes . . . . .	276
4.14	Self Exciting Threshold Autoregression Processes . . . . .	278
4.15	Exercise 4.9 . . . . .	297
4.16	Plots for question 2(b). . . . .	301
5.1	Simulated data from a VAR(22) . . . . .	315
5.2	Vector ACF and CCF . . . . .	316
5.3	Vector PACF and PCCF . . . . .	317
5.4	Impulse Response Functions . . . . .	324
5.5	Cointegration . . . . .	328
5.6	Detrended <i>cay</i> Residuals . . . . .	344
5.7	Impulse Response of Level-Slope-Curvature . . . . .	358
6.1	2-Step GMM Objective Function Surface . . . . .	376
7.1	Returns of the S&P 500 and WTI . . . . .	406
7.2	Squared returns of the S&P 500 and WTI . . . . .	407
7.3	Absolute returns of the S&P 500 and WTI . . . . .	414
7.4	News impact curves . . . . .	417
7.5	Various estimated densities for the S&P 500 . . . . .	426
7.6	Effect of distribution on volatility estimates . . . . .	428
7.7	ACF and PACF of S&P 500 squared returns . . . . .	430
7.8	ACF and PACF of WTI squared returns . . . . .	431
7.9	$RV^{AC1}$ and sampling frequency . . . . .	440
7.10	Volatility Signature Plot for SPY $RV$ . . . . .	441
7.11	Realized Variance and sampling frequency . . . . .	444
7.12	Black-Scholes Implied Volatility . . . . .	446
7.13	Option prices generated from the Black-Scholes pricing formula for an underlying with a price of \$100 with a volatility of 20% or 60% (bottom). The options expire in 1 month ( $T = 1/12$ ), and the risk-free rate is 2%. The solid lines show the out-of-the-money options that are used to compute the VIX. The solid markers show the values where the option price to be at least \$0.01 using a \$4 grid of strike prices. . . . .	450
7.14	VIX and alternative measures of volatility . . . . .	452
7.15	Plots for question 7.16. . . . .	463
8.1	Graphical representation of Value-at-Risk . . . . .	467
8.2	Estimated % VaR for the S&P 500 . . . . .	474

8.3	The estimated 5% VaR for the S&P 500 using weighted Historical Simulation for $\lambda \in \{0.95, 0.99, 0.999\}$ . The three values of $\lambda$ place 90% of the weight on the most recent 45, 230, and 2280 observations, respectively. Larger values of the decay parameter $\lambda$ produce smoother conditional VaR estimates. . . . .	475
8.4	S&P 500 Returns and a Parametric Density . . . . .	479
8.5	Empirical and Smoothed empirical Distribution and Density . . . . .	487
8.6	Naïve and Correct Density Forecasts . . . . .	488
8.7	Fan plot . . . . .	490
8.8	QQ plot . . . . .	491
8.9	Kolmogorov-Smirnov plot . . . . .	493
8.10	Returns, Historical Simulation VaR and Normal GARCH VaR. . . . .	499
9.1	Lag weights in RiskMetrics methodologies . . . . .	509
9.2	Rolling Window Correlation Measures . . . . .	516
9.3	Observable and Principal Component Correlation Measures . . . . .	517
9.4	Volatility from Multivariate Models . . . . .	528
9.5	Small-Cap - Large-Cap Correlation . . . . .	529
9.6	Small-Cap - Long Government Bond Correlation . . . . .	530
9.7	Large-Cap - Bond Correlation . . . . .	531
9.8	ETF Transactions per Day . . . . .	535
9.9	Pseudo-correlation and Cross-volatility Signatures . . . . .	537
9.10	ETF Realized Correlation . . . . .	538
9.11	Rolling Dependence Measures . . . . .	541
9.12	Exceedance Correlation . . . . .	542
9.13	Symmetric and Asymmetric Dependence . . . . .	546
9.14	Copula Distributions and Densities . . . . .	553
9.15	Copula Densities with Standard Normal Margins . . . . .	554
9.16	S&P 500 - FTSE 100 Diagnostics . . . . .	558
9.17	S&P 500 and FTSE 100 Exceedance Correlations . . . . .	563

# List of Tables

1.1	Monte Carlo and Numerical Integration . . . . .	56
2.1	Parameter Values of Mixed Normals . . . . .	89
2.2	Outcome matrix for a hypothesis test . . . . .	96
2.3	Inference on the Market Premium . . . . .	113
2.4	Inference on the Market Premium . . . . .	113
2.5	Comparing the Variance of the NASDAQ and S&P 100 . . . . .	115
2.6	Comparing the Variance of the NASDAQ and S&P 100 . . . . .	117
2.7	Wald, LR and LM Tests . . . . .	122
3.1	Fama-French Data Description . . . . .	132
3.2	Descriptive Statistics of the Fama-French Data Set . . . . .	133
3.3	Regression Coefficient on the Fama-French Data Set . . . . .	138
3.4	Centered and Uncentered $R^2$ and $\bar{R}^2$ . . . . .	142
3.5	Centered and Uncentered $R^2$ and $\bar{R}^2$ with Regressor Changes . . . . .	142
3.6	$t$ -stats for the Big-High Portfolio . . . . .	157
3.7	Likelihood Ratio Tests on the Big-High Portfolio . . . . .	159
3.8	Comparison of Small- and Large- Sample $t$ -Statistics . . . . .	171
3.9	Comparison of Small- and Large- Sample Wald, LR and LM Statistic . . . . .	172
3.10	OLS and GLS Parameter Estimates and $t$ -stats . . . . .	184
4.1	Estimates from Time-Series Models . . . . .	233
4.2	ACF and PACF for ARMA processes . . . . .	237
4.3	Seasonal Model Estimates . . . . .	255
4.4	Unit Root Analysis of $\ln CPI$ . . . . .	263
5.1	Parameter estimates from A Monetary Policy VAR . . . . .	312
5.2	Relative out-of-sample Mean Square Error for forecasts between 1 and 8-quarters ahead. The benchmark model is a constant for the unemployment rate and the inflation rate and a random walk for the Federal Funds rate. Model parameters are recursively estimated, and forecasts are produced once 50% of the available sample. Model order is selected using the BIC. . . . .	314
5.3	AIC and BIC in a Monetary Policy VAR . . . . .	319
5.4	Granger Causality . . . . .	321
5.5	Johansen Methodology . . . . .	339
5.6	Unit Root and Cointegration Tests . . . . .	342

5.7	Comparing Engle-Granger and Dynamic OLS . . . . .	342
6.1	Parameter Estimates from a Consumption-Based Asset Pricing Model . . . . .	375
6.2	Stochastic Volatility Model Parameter Estimates . . . . .	377
6.3	Effect of Covariance Estimator on GMM Estimates . . . . .	383
6.4	Stochastic Volatility Model Monte Carlo . . . . .	385
6.5	Tests of a Linear Factor Model . . . . .	390
6.6	Fama-MacBeth Inference . . . . .	395
7.1	Summary statistics for the S&P 500 and WTI . . . . .	412
7.2	Parameter estimates from ARCH-family models . . . . .	413
7.3	Bollerslev-Wooldridge Covariance estimates . . . . .	423
7.4	GARCH-in-mean estimates . . . . .	425
7.5	Model selection for the S&P 500 . . . . .	429
7.6	Model selection for WTI . . . . .	432
7.7	Option prices generated from the Black-Scholes pricing formula for an underlying with a price of \$100 with a volatility of 20%. The options expire in 1 month ( $T = 1/12$ ), and the risk-free rate is 2%. The third column shows the absolute difference which is used to determine $K_0$ in the VIX formula. The final column contains the contribution of each option to the VIX as measured by $^{2/T} \exp(r T) \Delta K_i / K_i^2 \times Q(K_i)$ . . . . .	451
8.1	Estimated model parameters and quantiles . . . . .	476
8.2	Unconditional VaR of the S&P 500 . . . . .	478
9.1	Principal Component Analysis of the S&P 500 . . . . .	512
9.2	Correlation Measures for the S&P 500 . . . . .	515
9.3	CCC GARCH Correlation . . . . .	525
9.4	Multivariate GARCH Model Estimates . . . . .	527
9.5	Refresh-time sampling . . . . .	533
9.6	Dependence Measures for Weekly FTSE and S&P 500 Returns . . . . .	541
9.7	Copula Tail Dependence . . . . .	552
9.8	Unconditional Copula Estimates . . . . .	556
9.9	Conditional Copula Estimates . . . . .	557
