Contents

1 Probability, Random Variables and Expectations **1**
1.1 Axiomatic Probability 1
1.2 Univariate Random Variables 7
1.3 Multivariate Random Variables 20
1.4 Expectations and Moments 33

2 Estimation, Inference, and Hypothesis Testing **57**
2.1 Estimation 57
2.2 Convergence and Limits for Random Variables 67
2.3 Properties of Estimators 71
2.4 Distribution Theory 78
2.5 Hypothesis Testing 94
2.6 The Bootstrap and Monte Carlo 106
2.7 Inference on Financial Data 111

3 Analysis of Cross-Sectional Data **129**
3.1 Model Description 129
3.2 Functional Form 133
3.3 Estimation 135
3.4 Assessing Fit 138
3.5 Assumptions 143
3.6 Small Sample Properties of OLS estimators 144
3.7 Maximum Likelihood 146
3.8 Small Sample Hypothesis Testing 148
3.9 Large Sample Assumption 163
3.10 Large Sample Properties 164
3.11 Large Sample Hypothesis Testing 166
3.12 Violations of the Large Sample Assumptions 171
3.13 Model Selection and Specification Checking 183
3.14 Projection 200
3.A Selected Proofs 202

4 Analysis of a Single Time Series 217
4.1 Stochastic Processes . . . 217
4.2 Stationarity, Ergodicity, and the Information Set . . . 217
4.3 ARMA Models . . . 220
4.4 Difference Equations . . . 228
4.5 Data and Initial Estimates . . . 235
4.6 Autocorrelations and Partial Autocorrelations . . . 236
4.7 Estimation . . . 248
4.8 Inference . . . 251
4.9 Forecasting . . . 252
4.10 Nonstationary Time Series . . . 256
4.11 Nonlinear Models for Time-Series Analysis . . . 268
4.12 Filters . . . 268
4.A Computing Autocovariance and Autocorrelations . . . 282

5 Analysis of Multiple Time Series 307
5.1 Vector Autoregressions . . . 307
5.2 Companion Form . . . 313
5.3 Empirical Examples . . . 314
5.4 VAR forecasting . . . 316
5.5 Estimation and Identification . . . 318
5.6 Granger causality . . . 323
5.7 Impulse Response Functions . . . 324
5.8 Cointegration . . . 330
5.9 Cross-sectional Regression with Time-series Data . . . 349
5.A Cointegration in a trivariate VAR . . . 355

6 Generalized Method Of Moments (GMM) 367
6.1 Classical Method of Moments . . . 367
6.2 Examples . . . 368
6.3 General Specification . . . 372
6.4 Estimation . . . 375
6.5 Asymptotic Properties . . . 379
6.6 Covariance Estimation . . . 383
6.7 Special Cases of GMM . . . 388
6.8 Diagnostics . . . 392
6.9 Parameter Inference . . . 394
6.10 Two-Stage Estimation . . . 397
6.11 Weak Identification . . . 399
6.12 Considerations for using GMM . . . 400

7 Univariate Volatility Modeling 403
7.1 Why does volatility change? . . . 403
7.2 ARCH Models . . . 405
7.3 Estimation and Inference . . . 423
7.4 GARCH-in-Mean . . . 428
7.5 Alternative Distributional Assumptions . . . 429
7.6 Model Building . . . 432
7.7 Forecasting Volatility . . . 434
7.8 Realized Variance . . . 440
7.9 Implied Volatility and VIX . . . 449
7.A Kurtosis of an ARCH(1) . . . 455
7.B Kurtosis of a GARCH(1,1) . . . 458

8 Value-at-Risk, Expected Shortfall and Density Forecasting 469
8.1 Defining Risk . . . 469
8.2 Value-at-Risk (VaR) . . . 470
8.3 Conditional Value-at-Risk . . . 472
8.4 Unconditional Value at Risk . . . 479
8.5 Evaluating VaR models . . . 482
8.6 Expected Shortfall . . . 487
8.7 Density Forecasting . . . 488
8.8 Coherent Risk Measures . . . 498

9 Multivariate Volatility, Dependence and Copulas 507
9.1 Introduction . . . 507
9.2 Preliminaries . . . 508
9.3 Simple Models of Multivariate Volatility . . . 511
9.4 Multivariate ARCH Models . . . 520
9.5 Realized Covariance . . . 530
9.6 Measuring Dependence . . . 540
9.7 Copulas . . . 549
9.A Bootstrap Standard Errors . . . 561

List of Figures

1.1 Set Operations . . . 3
1.2 Bernoulli Random Variables . . . 9
1.3 Normal pdf and cdf . . . 12
1.4 Poisson and χ^2 distributions . . . 14
1.5 Bernoulli Random Variables . . . 16
1.6 Joint and Conditional Distributions . . . 27
1.7 Joint distribution of the FTSE 100 and S&P 500 . . . 31
1.8 Simulation and Numerical Integration . . . 34
1.9 Modes . . . 40

2.1 Convergence in Distribution . . . 68
2.2 Consistency and Central Limits . . . 75
2.3 Central Limit Approximations . . . 76
2.4 Data Generating Process and Asymptotic Covariance of Estimators . . . 90
2.5 Power . . . 99
2.6 Standard Normal cdf and Empirical cdf . . . 108
2.7 CRSP Value Weighted Market (VWM) Excess Returns . . . 114

3.1 Rejection regions of a t_{10} . . . 151
3.2 Bivariate F distributions . . . 153
3.3 Rejection region of a $F_{5,30}$ distribution . . . 155
3.4 Location of the three test statistic statistics . . . 163
3.5 Effect of correlation on the variance of $\hat{\boldsymbol{\beta}}^{\text{IV}}$ . . . 178
3.6 Gains of using GLS . . . 183
3.7 Neglected Nonlinearity and Residual Plots . . . 189
3.8 Rolling Parameter Estimates in the 4-Factor Model . . . 192
3.9 Recursive Parameter Estimates in the 4-Factor Model . . . 193
3.10 Influential Observations . . . 196
3.11 Correct and Incorrect use of “Robust” Estimators . . . 199
3.12 Weights of an S&P 500 Tracking Portfolio . . . 201

4.1 Dynamics of linear difference equations . . . 234
4.2 Stationarity of an AR(2) . . . 236
4.3 VWM and Default Spread . . . 237
4.4 ACF and PACF for ARMA Processes . . . 242
4.5 ACF and PACF for ARMA Processes . . . 243

4.6 Autocorrelations and Partial Autocorrelations for the VWM and the Default Spread . . . 246
4.7 M1, M1 growth, and the ACF and PACF of M1 growth 258
4.8 Time Trend Models of GDP 261
4.9 Unit Root Analysis of $\ln CPI$ and the Default Spread 267
4.10 Ideal Filters 270
4.11 Actual Filters 273
4.12 Cyclical Component of U.S. Real GDP 277
4.13 Markov Switching Processes 280
4.14 Self Exciting Threshold Autoregression Processes 282
4.15 Plots for question 2(b). 298
4.16 Exercise 4.9 302
4.17 Plots for question 2(b). 306

5.1 Simulated data from a VAR(22) 319
5.2 Vector ACF and CCF 320
5.3 Vector PACF and PCCF 321
5.4 Impulse Response Functions 328
5.5 Cointegration 332
5.6 Detrended cay Residuals 348
5.7 Impulse Response of Level-Slope-Curvature 362

6.1 2-Step GMM Objective Function Surface 380

7.1 Returns of the S&P 500 and WTI 410
7.2 Squared returns of the S&P 500 and WTI 411
7.3 Absolute returns of the S&P 500 and WTI 418
7.4 News impact curves 421
7.5 Various estimated densities for the S&P 500 430
7.6 Effect of distribution on volatility estimates 432
7.7 ACF and PACF of S&P 500 squared returns 434
7.8 ACF and PACF of WTI squared returns 435
7.9 RV^{AC1} and sampling frequency 444
7.10 Volatility Signature Plot for SPY RV 445
7.11 Realized Variance and sampling frequency 448
7.12 Black-Scholes Implied Volatility 450
7.13 Option prices generated from the Black-Scholes pricing formula for an underlying with a price of $100 with a volatility of 20% or 60% (bottom). The options expire in 1 month ($T = 1/12$), and the risk-free rate is 2%. The solid lines show the out-of-the-money options that are used to compute the VIX. The solid markers show the values where the option price to be at least $0.01 using a $4 grid of strike prices. 454
7.14 VIX and alternative measures of volatility 456
7.15 Plots for question 7.16. 467

8.1 Graphical representation of Value-at-Risk 471
8.2 Estimated % VaR for the S&P 500 478

8.3 The estimated 5% VaR for the S&P 500 using weighted Historical Simulation for $\lambda \in \{0.95, 0.99, 0.999\}$. The three values of λ place 90% of the weight on the most recent 45, 230, and 2280 observations, respectively. Larger values of the decay parameter λ produce smoother conditional VaR estimates. 479
8.4 S&P 500 Returns and a Parametric Density 483
8.5 Empirical and Smoothed empirical Distribution and Density 491
8.6 Naïve and Correct Density Forecasts 492
8.7 Fan plot 494
8.8 QQ plot 495
8.9 Kolmogorov-Smirnov plot 497
8.10 Returns, Historical Simulation VaR and Normal GARCH VaR. 504

9.1 Lag weights in RiskMetrics methodologies 513
9.2 Rolling Window Correlation Measures 520
9.3 Observable and Principal Component Correlation Measures 521
9.4 Volatility from Multivariate Models 532
9.5 Small-Cap - Large-Cap Correlation 533
9.6 Small-Cap - Long Government Bond Correlation 534
9.7 Large-Cap - Bond Correlation 535
9.8 ETF Transactions per Day 539
9.9 Pseudo-correlation and Cross-volatility Signatures 541
9.10 ETF Realized Correlation 542
9.11 Rolling Dependence Measures 545
9.12 Exceedance Correlation 546
9.13 Symmetric and Asymmetric Dependence 550
9.14 Copula Distributions and Densities 557
9.15 Copula Densities with Standard Normal Margins 558
9.16 S&P 500 - FTSE 100 Diagnostics 562
9.17 S&P 500 and FTSE 100 Exceedance Correlations 567

List of Tables

1.1 Monte Carlo and Numerical Integration 56

2.1 Parameter Values of Mixed Normals 89
2.2 Outcome matrix for a hypothesis test 96
2.3 Inference on the Market Premium 113
2.4 Inference on the Market Premium 113
2.5 Comparing the Variance of the NASDAQ and S&P 100 115
2.6 Comparing the Variance of the NASDAQ and S&P 100 117
2.7 Wald, LR and LM Tests 122

3.1 Fama-French Data Description 132
3.2 Descriptive Statistics of the Fama-French Data Set 133
3.3 Regression Coefficient on the Fama-French Data Set 138
3.4 Centered and Uncentered R^2 and $\bar{\text{R}}^2$ 142
3.5 Centered and Uncentered R^2 and $\bar{\text{R}}^2$ with Regressor Changes 142
3.6 t-stats for the Big-High Portfolio 157
3.7 Likelihood Ratio Tests on the Big-High Portfolio 159
3.8 Comparison of Small- and Large- Sample t-Statistics 171
3.9 Comparison of Small- and Large- Sample Wald, LR and LM Statistic 172
3.10 OLS and GLS Parameter Estimates and t-stats 184

4.1 Estimates from Time-Series Models 237
4.2 ACF and PACF for ARMA processes 241
4.3 Seasonal Model Estimates 259
4.4 Unit Root Analysis of $\ln CPI$ 267

5.1 Parameter estimates from A Monetary Policy VAR 316
5.2 Relative out-of-sample Mean Square Error for forecasts between 1 and 8-quarters ahead. The benchmark model is a constant for the unemployment rate and the inflation rate and a random walk for the Federal Funds rate. Model parameters are recursively estimated, and forecasts are produced once 50% of the available sample. Model order is selected using the BIC. 318
5.3 AIC and BIC in a Monetary Policy VAR 323
5.4 Granger Causality 325
5.5 Johansen Methodology 343
5.6 Unit Root and Cointegration Tests 346

5.7 Comparing Engle-Granger and Dynamic OLS 346

6.1 Parameter Estimates from a Consumption-Based Asset Pricing Model 379
6.2 Stochastic Volatility Model Parameter Estimates 381
6.3 Effect of Covariance Estimator on GMM Estimates 387
6.4 Stochastic Volatility Model Monte Carlo 389
6.5 Tests of a Linear Factor Model 394
6.6 Fama-MacBeth Inference 399

7.1 Summary statistics for the S&P 500 and WTI 416
7.2 Parameter estimates from ARCH-family models 417
7.3 Bollerslev-Wooldridge Covariance estimates 427
7.4 GARCH-in-mean estimates 429
7.5 Model selection for the S&P 500 433
7.6 Model selection for WTI 436
7.7 Option prices generated from the Black-Scholes pricing formula for an underlying with a price of $100 with a volatility of 20%. The options expire in 1 month ($T = 1/12$), and the risk-free rate is 2%. The third column shows the absolute difference which is used to determine K_0 in the VIX formula. The final column contains the contribution of each option to the VIX as measured by $2/T \exp(rT)\Delta K_i / K_i^2 \times Q(K_i)$. 455

8.1 Estimated model parameters and quantiles 480
8.2 Unconditional VaR of the S&P 500 482

9.1 Principal Component Analysis of the S&P 500 516
9.2 Correlation Measures for the S&P 500 519
9.3 CCC GARCH Correlation 529
9.4 Multivariate GARCH Model Estimates 531
9.5 Refresh-time sampling 537
9.6 Dependence Measures for Weekly FTSE and S&P 500 Returns 545
9.7 Copula Tail Dependence 556
9.8 Unconditional Copula Estimates 560
9.9 Conditional Copula Estimates 561
